

ABSTRACT

Improved liquid foamer products, methods of preparation thereof, and end-use personal care products including the foamers are provided wherein the liquid foamers comprise a quantity of aqueous liquid hydrolyzed grain protein (e.g., aqueous liquid hydrolyzed wheat gluten protein) with an amount up to about 10% by weight of initially solid hydrolyzed grain protein (e.g., hydrolyzed wheat gluten protein powder) solubilized in the liquid ingredient. The foamer products have good foaming and color characteristics, and can be readily incorporated into a variety of personal care product formulations.
